## THREE FREQUENT QUESTIONS

2. WHERE DO I START?

3. HOW DO I MAKE MEANINGFUL PROGRESS?

## 1.WHY INVEST IN CHAOS ENGINEERING?

## DECISION

m

## JOURNEY

## INPUT TO DECISION: START HERE

#### **PRINCIPLES OF CHAOS ENGINEERING** Last Update: 2018 May

Chaos Engineering is the discipline of experimenting on a system in order to build confidence in the system's capability to withstand turbulent conditions in production.

Advances in large-scale, distributed software systems are changing the game for software engineering. As an industry, we are quick to adopt practices that increase flexibility of development and velocity of deployment. An urgent question follows on the heels of these benefits: How much confidence we can have in the complex systems that we put into production?

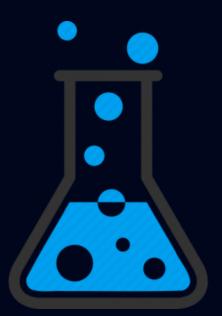

Even when all of the individual services in a distributed system are functioning properly, the interactions between those services can cause unpredictable outcomes. Unpredictable outcomes, compounded by rare but disruptive real-world events that affect production environments, make these distributed systems inherently chaotic.

We need to identify weaknesses before they manifest in system-wide, aberrant behaviors. Systemic weaknesses could take the form of: improper fallback settings when a service is unavailable; retry storms from improperly tuned timeouts; outages when a downstream dependency receives too much traffic; cascading failures when a single point of failure crashes; etc. We must address the most significant weaknesses proactively, before they affect

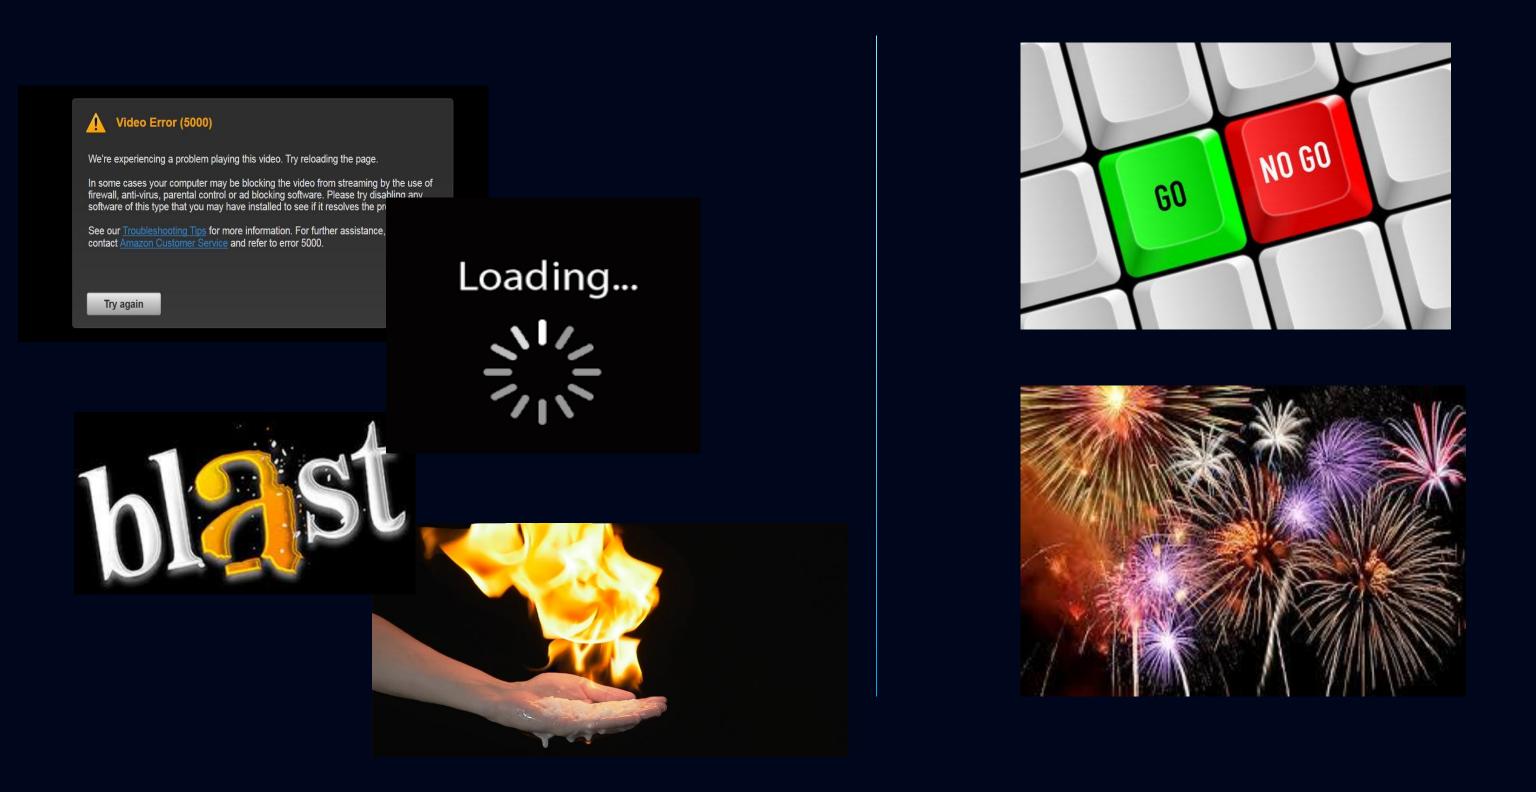

Chaos Engineering Principals

principlesofchaos.org

Chaos engineering is about breaking things in a controlled environment and through wellplanned experiments in order to build confidence in your application to withstand turbulent conditions.

## INPUT TO DECISION: DOES THIS LOOK FAMILIAR?

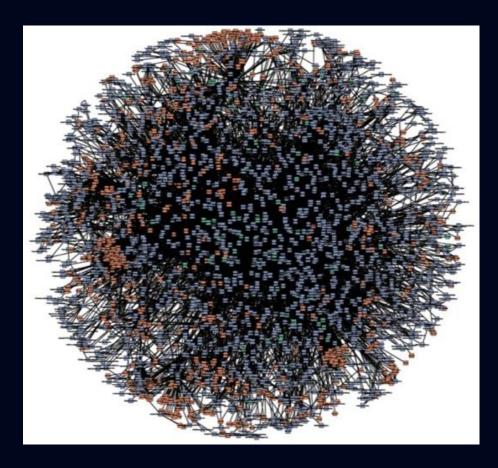

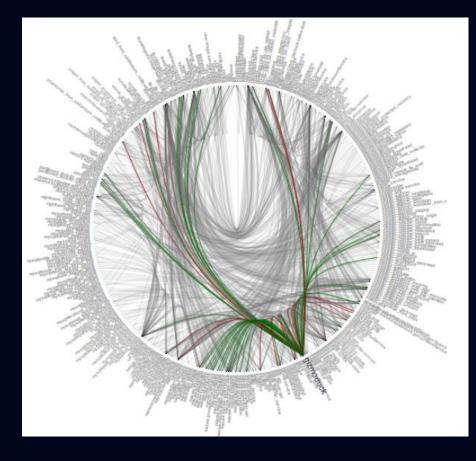

## INPUT TO DECISION: DISTRIBUTED SYSTEMS ARE HARD

- Errors happen anytime , often in combination with other errors.
- Results of network operations can be unknown (succeeded, failed, or received but not processed).
- Problems occur at all logical levels.
- Problems get worse at higher levels of the system, due to recursion.
- Bugs often show up long after they are deployed to a system.
- Bugs can spread across an entire system.

ner errors. eded, failed, or received

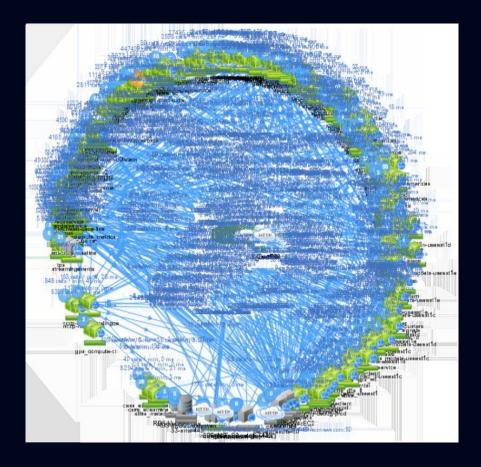

e to recursion. system.

### Netflix

## INPUT TO DECISION: ASK IF TRADITIONAL TESTING IS ENOUGH?

Testing: verifying a **KNOWN** condition: e.g. assert(A = B)?

Unit testing of components: Tested in isolation to ensure function meets expectations.

Functional testing of integrations: • Each execution path tested to assure expected results.

## "Failures are a given and everything will eventually fail over time".

### Werner Vogels CTO – Amazon.com

## DECISION MADE! BUILDING CHAOS JOURNEY

## WHERE TO START "A JOURNEY OF THOUSAND MILES BEGINS WITH A SINGLE STEP." - LAO TSU

## INPUT TO JOURNEY: HIRE THE RIGHT TALENT

Jesse Robbins, "Master of Disaster"

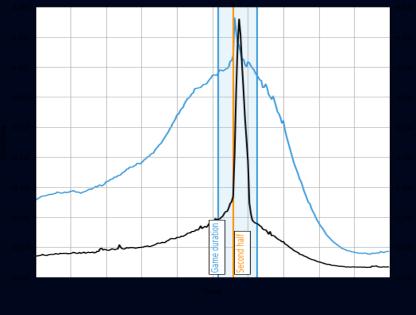

engineer at Amazon.com. complex networks.

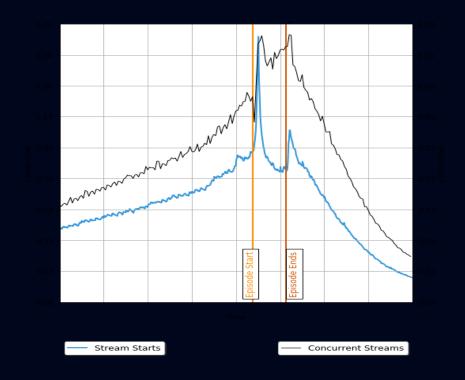

- failures.
- Founded **Chef**, the Velocity Web Performance & ullet**Operations Conference.**

- In 2001, a volunteer firefighter applied for two jobs: a bus driver and a backup systems
- In the decade that followed, he transformed the way Web companies design and manage

Created **GameDay** to purposefully create regular major

## INPUT TO JOURNEY: UNDERSTAND YOUR INITIAL OBJECTIVES

### 1. BUSINESS CASE

- 2. TRENDS

  - depth of dependencies?

### 3. CULTURE

### • A specific event vs capabilities launch

 What is your systems profile, how much has been developed within last 3 years? • What is the #1 source of failures? What is the

• How strong is your technical operations culture? Is this about evergreen, always ready, state of tech?

## GOALS PLAYBOOK

## 1. PRIORITIZE BUSINESS CASE

## 2. MEASURE TRENDS, SET KPIS AND IMPROVEMENT GOALS

### 3. AIM TO CHANGE CULTURE

## PRIME VIDEO PEAK EVENTS AND LAUNCHES

OUTLANDER

## SCALING

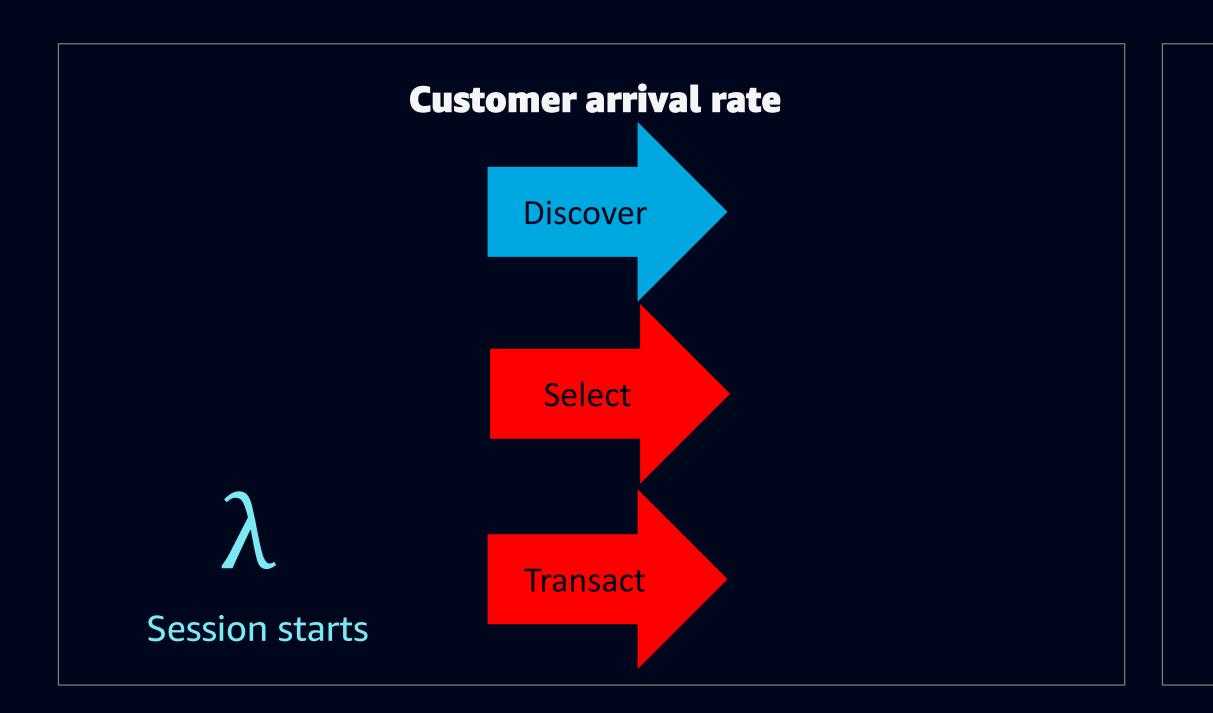

## INPUT TO JOURNEY: UNDERSTAND YOUR BUSINESS CASE

## Number of Customers In System = Arrival Rate x Mean Time In System

## $L = \lambda \times W$

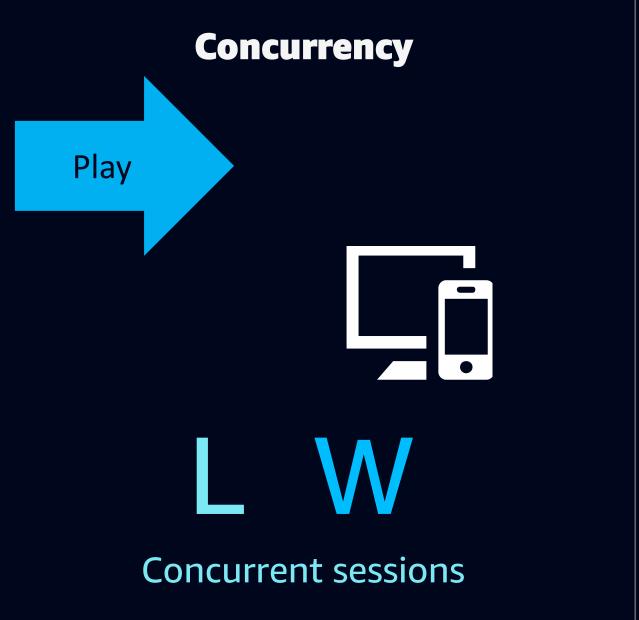

## Arrival rate matters greatly for live/and or exclusive video.

#### Chaos

## PRIME VIDEO JOURNEY: FROM MANUAL CHAOS TO AUTOMATED RESILIENCE

 $\mathbf{O}$ 

Built internal chaos products

Added engineering branch

Gamedays are evergreen

Manual load testing

Communities Specialization

Automated Chaos

Fully automated scaling

Evergreen programs

Availability Scaling Resilience

Peak Readiness

Performance

## Program structure

- Central engineer team
- Infrastructure TPMs team
- Infrastructure efficiency
- and optimization
- Opt-in SPOCs in each team (SRE equivalents)

## INPUT TO JOURNEY: CHALLENGES AND PERCEPTIONS

- Starting is perceived as hard!
- No time or flexibility to simulate disasters.
- Teams already spending all of its time fixing things.
- Can be political.
- Leads to deep conversations.
- Deeply invested in a specific technical roadmap (micro-services)

- Start with a process simulation, bring automation later
- Bring fun & depth into "doing things"
- Engage your business partners, take joint goals
- Trade Offs are ok!
  - One tech bar, multiple mechanisms to achieve it

## Start with a specific business case

HOW TO MAKE MEANINGFUL PROGRESS?

START WITH GOALS, NOT RESOURCES!

#### Stats

#### Highlights

Lineups

Chamberlain replaces Roberto Firmino.

#### 78' Goal

Goal! Liverpool 3, Manchester City 1. Bernardo Silva (Manchester City) left footed shot from the centre of the box to the bottom right corner.

#### 78' Goal Attempt

Attempt blocked. Kyle Walker (Manchester City) right footed shot from the right side of the box is blocked.

#### 77' Goal Attemnt

77' Goal Attemnt

the box is blocked.

## GOALS STRATEGIES

BREADTH VS DEPTH SPECIFIC VS GENERIC E.G. LAUNCH OR CAPABILITIES SINGLE OWNER VS. PARTNERSHIP COVERAGE VS EXPERIMENTATION

b

## FAILURE INJECTION TEST (FIT) GOALS

Database Load Entropy Drain Kernel Panic VIP Move Stop and Go Slow Consumer Database Exhaustion Read Only File System IOPS Hog Large File Injection Disk Hog Log Scan Latent Hostclass Bad Dependency Reboot Host Packet Loss Hostclass Dependency Exception Injection Latency Injection Memory Hog a CPU Hog Port Blackhole Packet Loss Dependency

b) 5 teams to execute all available experiments by a <date>

## Examples

### a) 100% of the teams to execute 5 experiments, monthly

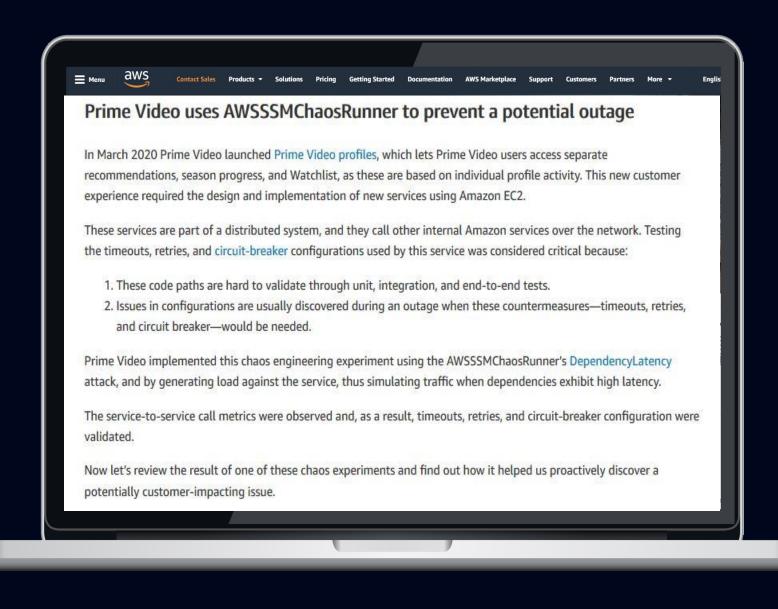

#### VS

## FAILURE INJECTION TEST (FIT) PREVENTIVE EXAMPLE

### AWS Open Source Blog, Aug 18, 2020 Building resilient services at Prime Video with chaos engineering

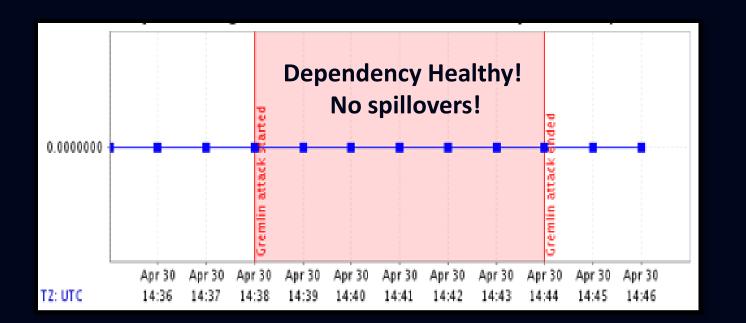

- Goal: confirm that APIs timeouts do
  - not exceed agreed upon limit
- Hypothesis: the timeout is set at 40
  - milliseconds
- Experiment: generated 1000 requests
  - against the service, injected 2s latency
- Learning: the timeout reached 6s
- Action: find/fix a bug in the
  - configuration, rerun the experiment

## FAILURE INJECTION TEST (FIT) REACTIVE EXAMPLE

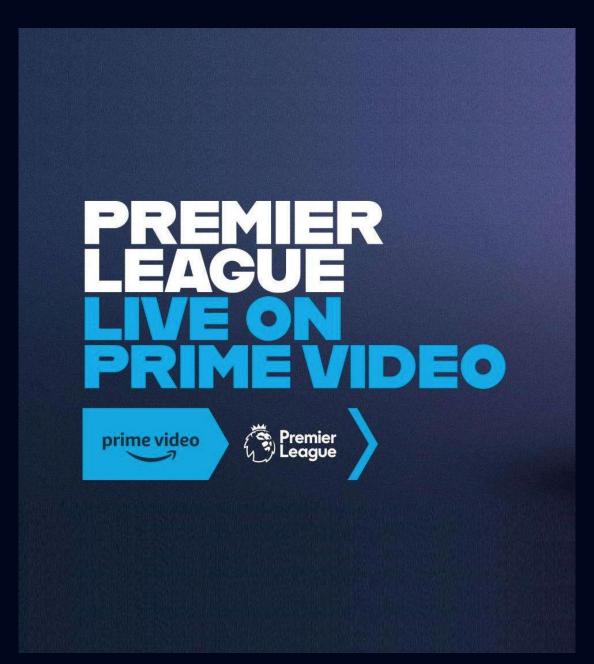

- Problem: Downstream dependency throttled
  - traffic & caused availability drop
- Solution: Implemented fast-fail circuit-breaker
- latency
- Learning: Confirmed circuit break performance, retries and latency impacts
- Experiment: simulate dependency throttling, inject

## EPL LAUNCH GOALS

## FEATURES GOAL

Generic Release to Beta early 

## SCALE AND RESILIENCE GOAL

- 100% Availability Gamedays and Simulations Chaos and Resilience as mechanisms
- Specific

## Avoid a large feature wave, flatten

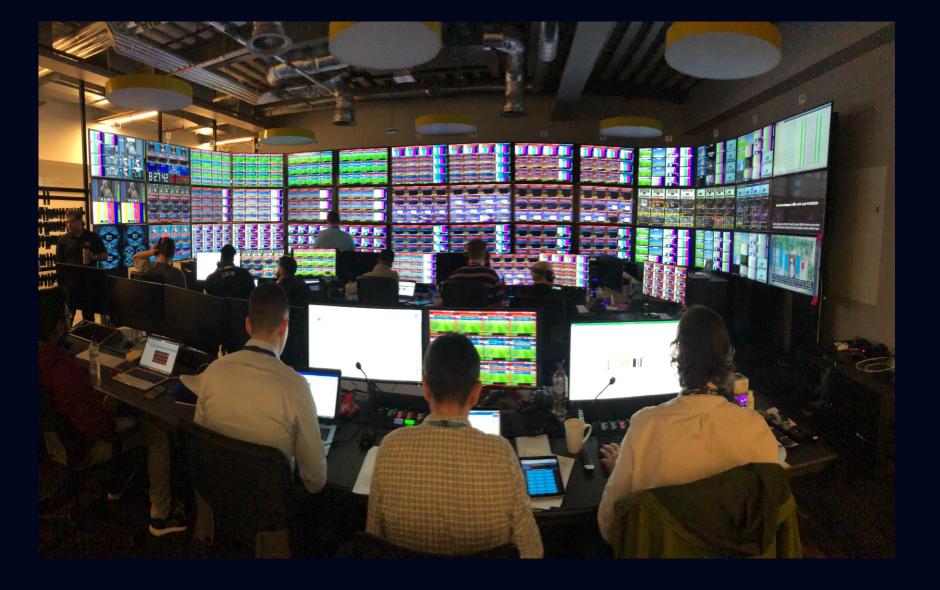

## LAUNCH GOAL: TO BE ABLE TO DETECT AND RESOLVE ANY ISSUE REAL TIME.

SIMULATION GOAL: FOR ALL TEAMS AND PARTICIPANTS TO UNDERSTAND THEIR ROLES AND RESPONSIBILITIES IN VARIOUS SCENARIOS, AND ENSURE THAT ALL RESOURCES ARE IN PLACE TO FULFILL THESE ROLES AND RESPONSIBILITIES.

## SIMULATIONS

- Attended by all teams supporting EPL, majority of which flew to London, over two days.
- Each day mimicked our live coverage, using real EPL matches broadcasted to beta customers over eight hours
- Simulations were injected to audit overall readiness, and pressure test triage strategies.

## SIMULATIONS

## Success Criteria

- Generated a list of possible issues across three 1. How quickly were we able to recognize the categories: issue? 1) Recent high severity events, 2. How quickly did we mitigate it? 2) Scenarios that could be a risk, and 3. Are we satisfied with our containment of the
  - overall blast radius given the issue at hand
  - (i.e. did it meet our success criteria)?

- - 3) Scale related issues we haven't seen before.
- We didn't make individual teams aware of the
  - specific scenarios that we will test.
- Operated multiple scenarios at once.

## Execution

## SIMULATIONS

## LIST OF SIMULATIONS

- 1. Host failures (~10 services)
- 2. Operator errors (use of "double agents")
- 3. Critical tooling outages (Chime, video conferencing)
- 4. Misconfigured links
- 5. Live signal loss
- 6. Managing noise (red herring issues)
- 7. CDN/ISP failures

## GOALS OWNERSHIP MODEL

YOU CONTROL INPUTS YOU DEPEND ON INPUTS FROM OTHERS YOU SUCCEED WHEN MANY SUCCEED

SINGLE THREADED OWNER JOINT OWNERSHIP DISTRIBUTED OWNERSHIP

## ADOPTION VS EXPERIMENT GOAL

## X% OF OUR SYSTEMS WILL ADOPT "Y" TECH BY "Z" DATE

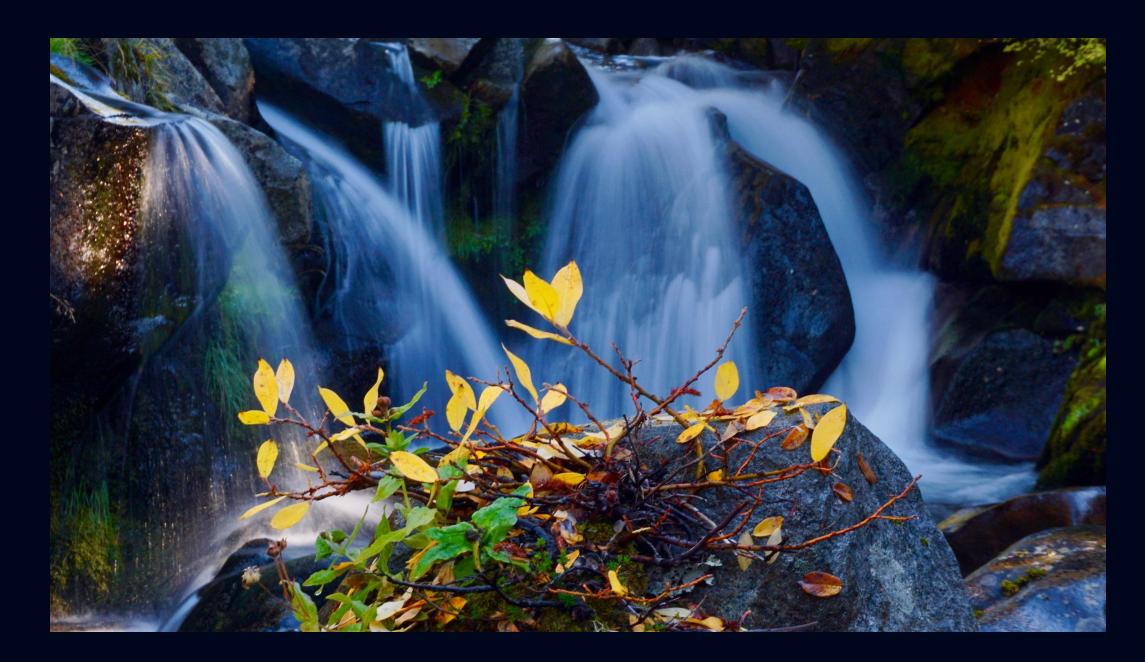

MILESTONE

## WE WILL DEVELOP A PILOT BY "X" DATE AND CREATE A PLAN FOR ROLL OUT BY "Y"

## ALL GOALS LEAD ... TO RESILIENCE!

#### THE CAPACITY TO RECOVER QUICKLY FROM DIFFICULTIES; TOUGHNESS.

## RESILIENCE BUILDS ON SCALING & AVAILABILITY BRINGS IN INFRASTRUCTURE INTO FOLD

Dr Emmy E. Werner, 40 years of resilience study

- 1. stress.
- Ordinary, not extraordinary. 2.
- 3.
- 4. can be learned and developed in anyone.

Process of adapting well in the face of adversity, trauma, tragedy, threats or significant sources of

Is not a trait that we either have or do not have. It involves behaviors, thoughts and actions that

## JOURNEY TAKEAWAYS

- 1. Start with a specific goal.
- 2. The first step is important. Next, keep a programmatic focus. Iterate on goals, use goals playbook and strategies. Decide on ownership. Repeat. 3. Keep learning about customers, create a feedback loop
- between your learnings and customers.

## LOOKING AHEAD

## WHAT DOES THE FUTURE HOLD...

## "Always Day 1"

- 1. Continue to roll out new events and features that delight our customers, at scale
- 2. Distribute goals ownership
- 3. Strike the right balance

## Chaos Engineering won't make your system more robust, People will.
